

Review of Work Packages: CombNet

Sjaak van Loo, Jaap Koppejan
April 3, Lille, France

Supported by the
European Commission under the
Intelligent Energy - Europe
Programme

ThermalNet
PyNe/GasNet/CombNet

Procedure

Step 1: Inventory of issues from work package descriptions

Step 2: Inventory of the contribution of these issues to:

- Pyne
- GasNet
- CombNet
- More or All

When contribution is not clear: own interpretation

Step 3: Combine CombNet issues

Step 4: Prioritizing the issues

Step 4: Suggestions for work programme

Results: CombNet Issues

(1)

- **Fuel Issues**
 - Availability
 - Flexibility
 - Pre-treatment
- **Boiler side issues**
- **Fundamental issues**
- **Environmental issues:**
 - Add-on technology
 - Ash
 - General issues
- **Non-technical issues**
 - Economic issues
 - Legislation / Policy
 - Market / Funding
 - Public perception / Education

Results

(2)

Topic	WP-number											
	2A	2B	2C	2D	2E	2F	2G	2H	3A	3B	3C	3D
FUEL ISSUES												
Availability												
Biomass potentials, prices and availability												
No established supply infrastructure												
Feedstock availability												
Flexibility												
Increased fuel flexibility (quality, quantity)												
Cofiring RDF and contaminated biomass												
Fuel contamination												
Quality and quantity of fuel												
Pre-treatment												
Particle size control												
Thermochemical pre-treatment (torrefaction, pyrolysis, gasification)												
Physical pre-treatment (pelletization, drying, size reduction)												
Pretreatment												
On site fuel handling												
Moisture content												

Results

(3)

Topic	WP-number											
	2A	2B	2C	2D	2E	2F	2G	2H	3A	3B	3C	3D
BOILER SIDE ISSUES												
Fouling and corrosion of the boiler (alkali and other metals, chlorine)												
Fouling and corrosion of the boiler												
Gas-side corrosion of high temperature components												
High temperature steam boilers												
Behavior of biomass ashes at elevated temperatures												
Ash characteristics												
Particle burn-out and gas mixing												

Results

(4)

Topic	WP-number												
	2A	2B	2C	2D	2E	2F	2G	2H	3A	3B	3C	3D	
FUNDAMENTAL ISSUES													
Comprehensive assessment about the actual scientific knowledge on													
Research activities on fundamentals													
Experimental methodologies													
Solid fuel reactivity													
Chemical kinetics													
Transport models for chemical reactors													
Transport models for single particles													
Research activities on technologies													

Results

(5)

Topic	WP-number												
	2A	2B	2C	2D	2E	2F	2G	2H	3A	3B	3C	3D	
ENVIRONMENTAL ISSUES													
<i>Add-on technology</i>													
Particle removal within combustion													
Impact of ash components in gas clean-up equipment													
Removal of SO ₂ , NO _x and incomplete burned carbon (CO and HC) in													
Effects on performance of gas cleaning systems													
Deactivation of DeNO _x catalysts													
Reduction of gaseous emissions in combustion of pyrolysis products													
<i>Ash</i>													
Ash quality and reuse in building materials													
Legislative aspects (utilization of fly ash in cement, determining green													
<i>General environmental issues</i>													
Environmental performance													
Understanding of the whole bioenergy chain and environmental aspects													
Legislation & authorizations													
Existing legislative barriers													

Results

(7)

Topic	WP-number											
	2A	2B	2C	2D	2E	2F	2G	2H	3A	3B	3C	3D
NON TECHNICAL ISSUES												
<i>Economic issues</i>												
Economic aspects (lack of financial incentives, uncertain fuel Economics)		■	■				■	■	■	■	■	■
Capability to estimate capital and operating costs of different Variables and methods of TEA (reliability of the predicted economic Effect of environmental and social issues on TEA and MCDA)		■	■	■	■	■	■	■	■	■	■	■
Fuel costs		■	■				■	■	■	■	■	■
<i>Legislation / Policy</i>												
Legislative aspects (utilization of fly ash in cement, determining green Policy)		■	■				■	■	■	■	■	■
Low policymakers' expectations		■					■	■	■	■	■	■
Unclear political intentions		■					■	■	■	■	■	■
<i>Market / Funding</i>												
Grid access									■	■	■	■
Risks/guarantees associated with plant development			■	■	■	■	■	■	■	■	■	■
Gap between laboratory RTD and big scale industrial RTD		■	■	■	■	■	■	■	■	■	■	■
Inappropriate/insufficient funding		■	■				■	■	■	■	■	■
Lack of established market and new market uncertainty		■	■	■			■	■	■	■	■	■
Knowledge flow between and engagement with stakeholders		■	■	■			■	■	■	■	■	■
<i>Public perception / Education</i>												
Public perception of co-firing of biomass/waste		■	■	■					■	■	■	■
Inadequate knowledge of thermal bioenergy technologies and their Lack of understanding of technology/benefits, negative perceptions of Communication capability, needed to improve public perception of Existing needs in bioenergy education		■	■	■	■	■	■	■	■	■	■	■
Availability of educational activities (short courses, Master courses,											■	■

Conclusions and suggestions

- **Important issues are covered by the work packages**
- **No overlap, but strong possibilities for synergy**
- **Several issues already covered in present and previous meetings**
- **Suggestions made for future workshops**

Evaluation is available for WP leaders (excel sheet)
